Rhodopsin vesicles derived from retinal-outer-segment membranes: effect of light and detergent on the lipid fraction

By N. VIRMAUX, M. DELMELLE, G. NULLANS and H. DREYFUS
Volume 6 (1978)

p. 670, line 1:

after pH 7.4, insert for 1 mg of retinal-outer-segment protein. The insoluble material was washed extensively with 66 mM-sodium phosphate buffer, pH 7.4. In Fig. 1 the e.s.r. spectrum observed with
